(pharmacla) with a modified polylinker; Site 1: BcoR I;

Site 2: Not I; NCI CGAP FIL is a normalized cDNA library

derived from a pool of mRNA obtained from 4 cell lines

from grade III chondrosarcoma tissues. The library was

constructed according to Bonaldo, Lemnon and Soares,

Genome Research, 6:791-806, 1996. First strand cDNA

synthesis was primed with an oligo-dT primer containing a

synthesis was primed with an oligo-dT primer containing a

synthesis. Double stranded cDNA was ligated to an EcoR I

adaptor, digested with Not I, and cloned directionally

into pT7T3-Pac vector. The oligonucleotide used to prime

the synthesis of first-strand cDNA contains a library tag

sequence that is located between the Not I site and the

(dT)18 tail. The sequence tag for this library is

GAGGTCGGTG. The cell lines were provided by Dr. James

Martin from the University of Iowa.
